

A practical operating model for governed intelligence products.

Turn expert judgment into products that make evidence visible, keep human authority intact, and improve through controlled learning.

DECISION ARCHITECTURE

The model may interpret and recommend. Deterministic controls and accountable people decide what may act.

FIVE PRODUCTION GATES

- 1 The decision and desired outcome are measurable.
- 2 Evidence is source-linked, current, and challengeable.
- 3 The agent's authority, risk envelope, and hard limits are explicit.
- 4 Human escalation, override, and ownership are operational—not ceremonial.
- 5 Evaluation, monitoring, rollback, and feedback are part of the product.

START HERE

What decision should become easier—and what evidence and human judgment must remain visible when it does?
